

PRESS RELEASE

London, 12 October 2006 – The latest issue of *Outlooks on Pest Management* includes the articles:

“Microbial contamination of ready-to-eat salad vegetables” by Helen Meakin and Matt Dickinson.

In the light of recent fatalities in the USA following consumption of ready-to-eat spinach, this article outlines the approaches that can be employed to reduce microbial contamination.

“Improving pest management with remote sensing” by David R. Shaw and Jeffrey L. Willers

Describes how the remote sensing of weeds and insects can aid their selective control.
